

ENVIRONMENTAL POLLUTION

Environmental pollution is one of the biggest problems in the world today. It is an issue that troubles us in many different ways. Earth is considered as the only planet where life exists. It gives us everything like air, water, land, plants for the survival of life. We cannot live without these things. Currently the major issue of environmental pollution surrounds us. Air pollution, water pollution and soil pollution are one of the most dangerous forms of pollution causing health disorders. The polluted air we breathe goes to our whole body and attacks all the systems. It can become source for many diseases like asthma, bronchitis, lungs problems. Today, a major threat to the life is development of nuclear sciences, because it releases lots of harmful chemicals, poisonous gases and dust into the air, which falls back to the earth. Water pollution is also big problem in the world. Factories and all kinds of industries cause it because they are dumping their harmful wastes directly into the rivers, lakes and oceans. Drinking polluted water can cause many diseases. Environmental pollution is not the problem of only one country; it is the issue of the whole world. It needs effort from all of us together. If it is not taken under control, it may affect the whole universe in the future. Only decreasing number of plants can cause such a big problem and that is not our only mistake, we are making them on a daily basis and it should not be a surprise for us if one day life ends on this planet. There are many activities that we can do to improve the world's environmental problem. Some of the countries have already been doing something about it. If we do not take this serious and start making changes in our world right now, it could be too late tomorrow.
