

## **LET THERE BE LIGHT - ENVIRONMENT**

Clean and safe environment is the most important thing for every specie on planet Earth. We are constantly surrounded by nature and we are responsible for it, although many people are not aware of it because they got used to the fact that they have clean air and water available at every minute of the day. However, the thing is, people need to start caring before it is too late.

First, I want to talk why it is good to keep environment in good shape. Water, air and sunlight are essentials for every living being on planet, and people's carelessness got some of plants and animals to the edge of extinction. Nevertheless, with destroying the world around us, we are literally destroying ourselves. Luckily, people are slowly waking up, establishing organizations and foundations like WWF to help save environment.

Secondly, countries need to stop digging for natural resources. Extraction of natural oils and gases is doing harm to the nature. For example, the extractions were planned in the Adriatic Sea, but people reacted harshly because of the damage that could be done on flora, fauna and purity of the sea, and with that on the tourism itself.

Thirdly, the positive thing is spreading the usage of solar energy. Although it is still expensive, people are realizing that by spending money in present they can save money in the future and help the nature. It's great source of renewable energy, which helps reduce pollution and has great long-term benefits.

To sum it up, environment is one of the things we must cherish and protect at all costs because we depend on it and whole Earth does. There are many selfish and cold people who endanger our environment and we all have to unite and stand against those kinds of people.
